TASK 2

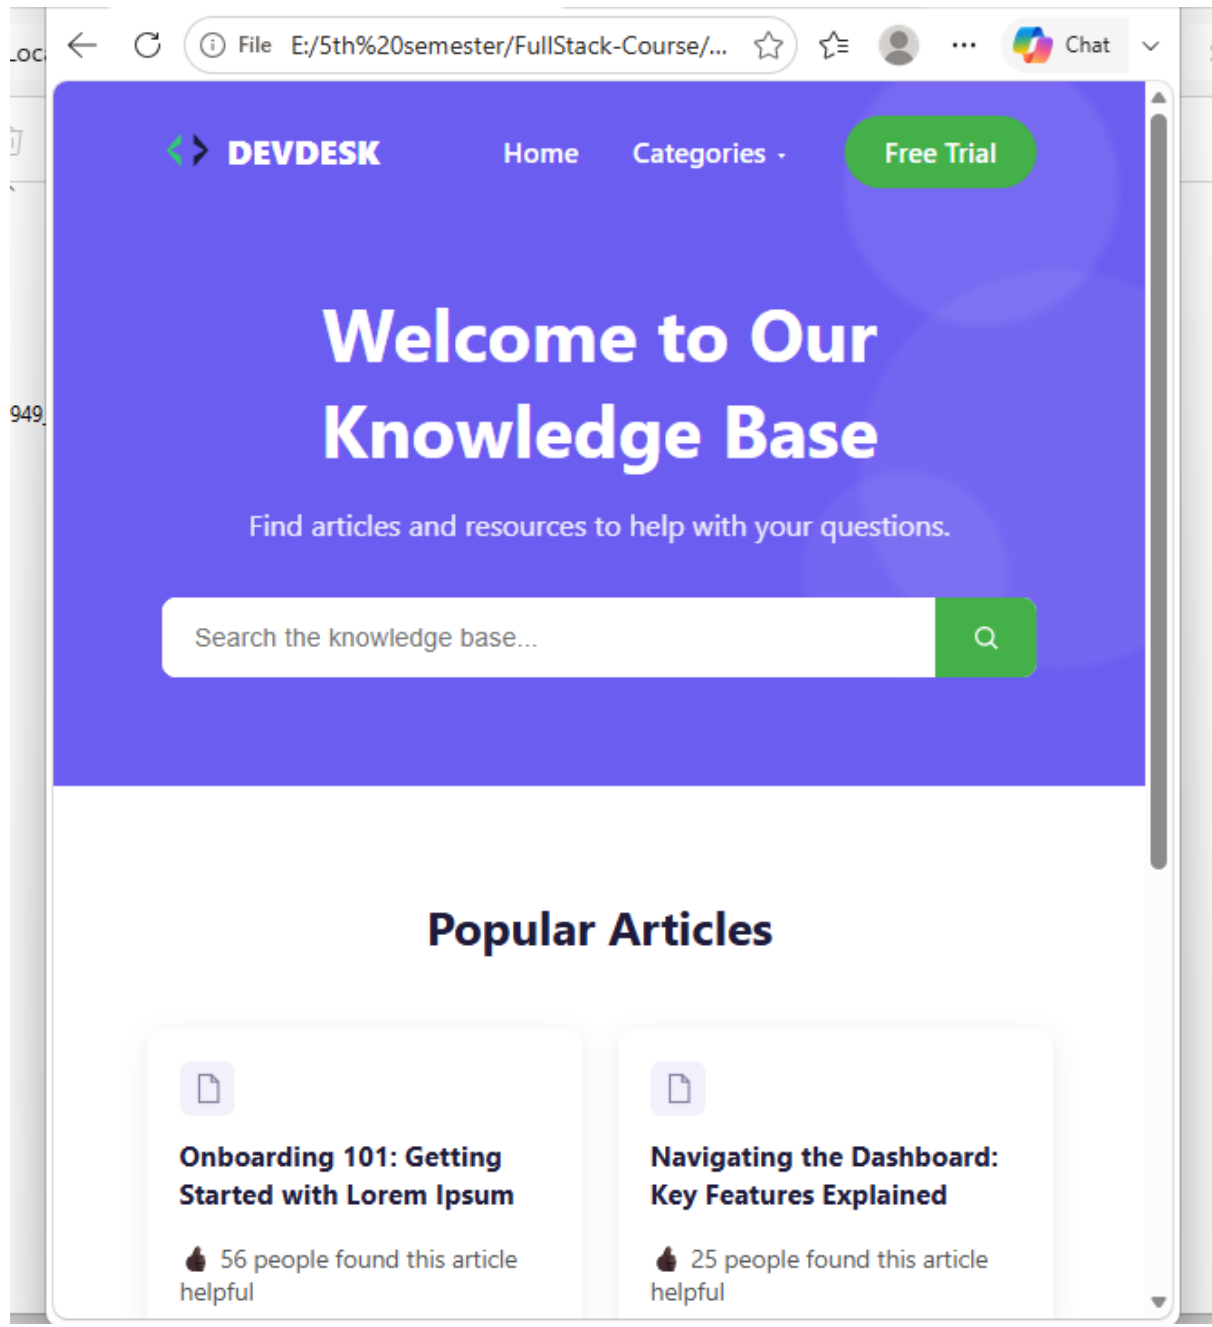

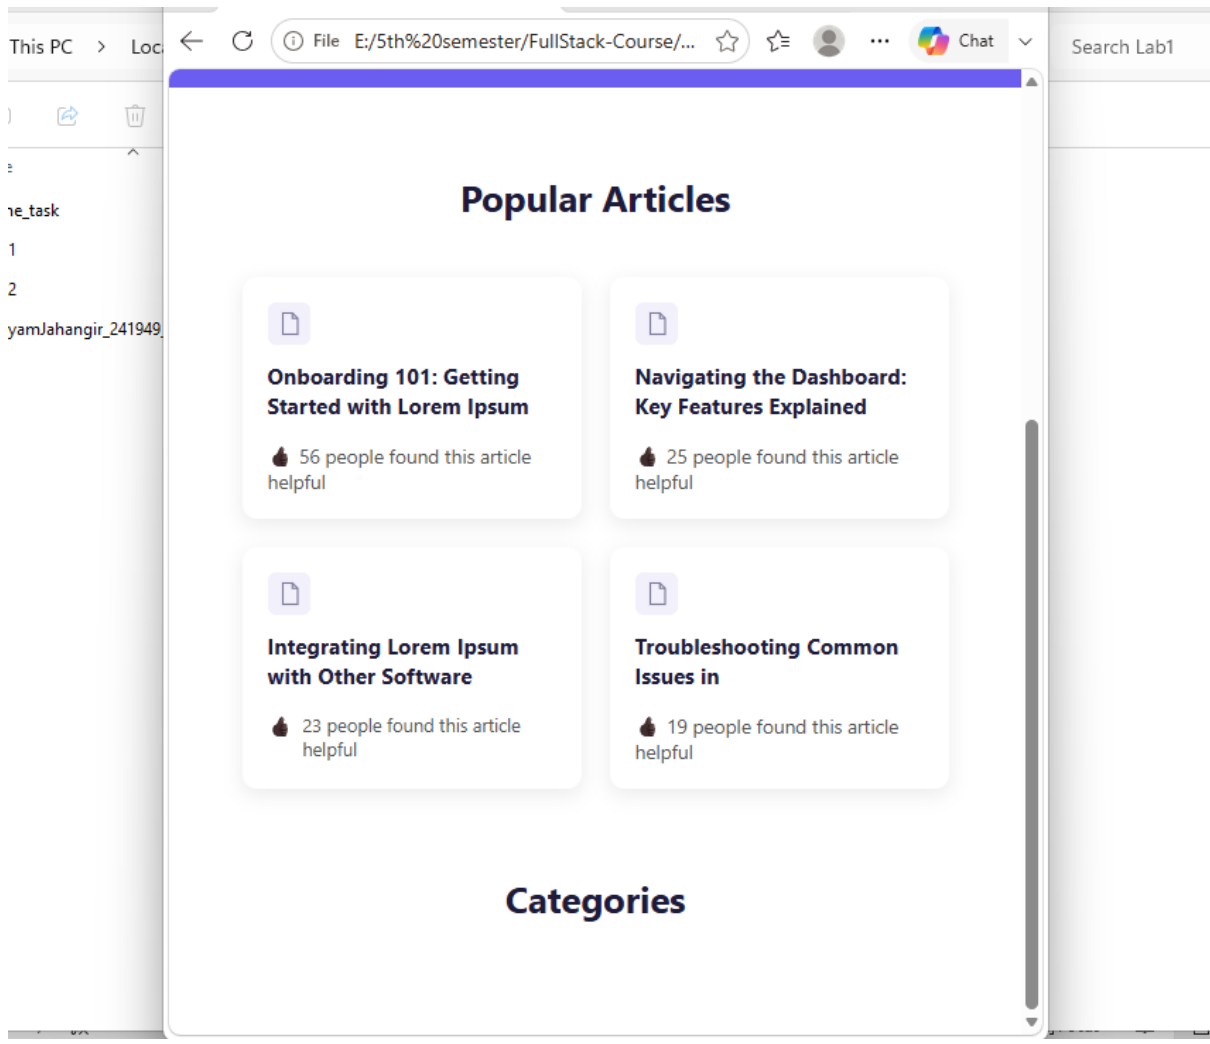

- Now my concepts related to the grid system and breaking points are more clear.
- **Three cards** inside a Bootstrap container and row.
- For each card, classes **col-4 col-md-6 col-lg-12**.
- **On small screens:** **col-4** is applied, so each card takes **4 out of 12 columns**. This means all three cards can fit in the same row because $4 + 4 + 4 = 12$.
- **On medium screens:** **col-md-6** is applied, so each card takes **6 out of 12 columns**. Therefore, only **two cards fit in one row**, as $6+6 = 12$ and the third card moves to the next row.
- **On large screens:** **col-lg-12** is applied, so each card takes the **full 12 columns**. Therefore, all three cards appear **one below another**, with each card taking the full row width.
- Used Bootstrap's predefined card and card-body classes to create the cards without writing custom CSS for their basic structure.
- `bg-light` for the light background and `py-4` for vertical padding.

HOME TASK

- In the navbar, I used Flexbox with `justify-content: space-between` to place the logo on one side and navigation links on the other.
- The hero section uses a purple background with multiple `radial-gradient()` effects to create the background design.
- The search bar using Flexbox, where the input takes the available space using `flex: 1`.
- For the Popular Articles section, I created four separate article cards and arranged them using `display: flex`, `gap`, and `flex-wrap`.
- Each article card has an icon, heading, and helpful count. I used `box-shadow`, `border-radius`, and `padding` to improve the card design.
- SVG elements for the **DevDesk logo, search icon, and document icons** instead of using image files.
- The Free Trial button and search button were styled separately using background colors, padding, and border-radius.
- `max-width` and `margin: 0 auto` to keep the content centered and prevent it from becoming too wide.
-
