Registration form

Registration form in the middle of a green page. It has two columns of fields, gender radio buttons and a Register button.

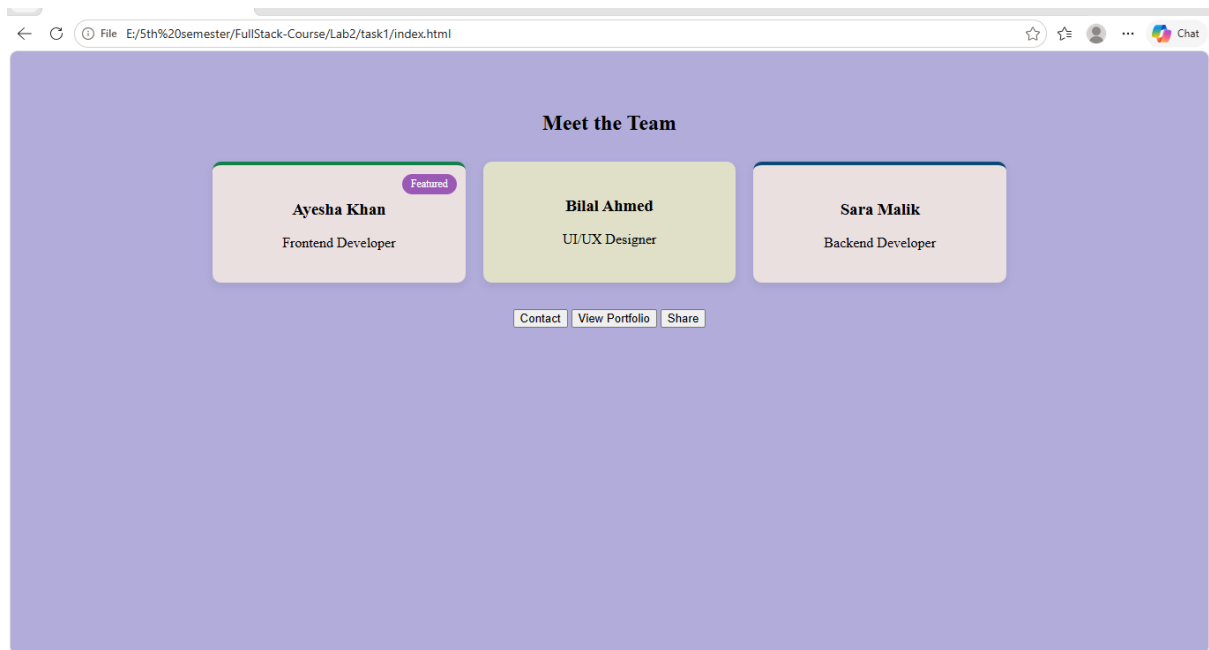

The screenshot shows a web browser window with a single tab titled "Registration Form". The address bar shows the file path "E:/5th%20semester/FullStack-Course/Lab2/task1/index.html". The page has a dark green background. In the center is a white registration form card. The form is titled "Registration" in bold. It contains two columns of input fields: "Full Name" and "Username" in the first row, "Email" and "Phone Number" in the second row, and "Password" and "Confirm Password" in the third row. Each field has a placeholder text. Below these fields is a "Gender" section with three radio buttons labeled "Male", "Female", and "Prefer not to say". At the bottom of the form is a large, rounded, olive-green button labeled "Register".

- Made the HTML page and linked Bootstrap 5.
- Used Flexbox to keep the white form card in the centre of the page.
By justify content center
- Bootstrap grid (row and columns) to put two fields side by side.
- Bootstrap classes form-label and form-control for the labels and input boxes.
- Added three radio buttons with the same name, so only one can be selected.
- Styled the Register button with full width, a round border-radius and my own colour.

Task 1 with Teacher

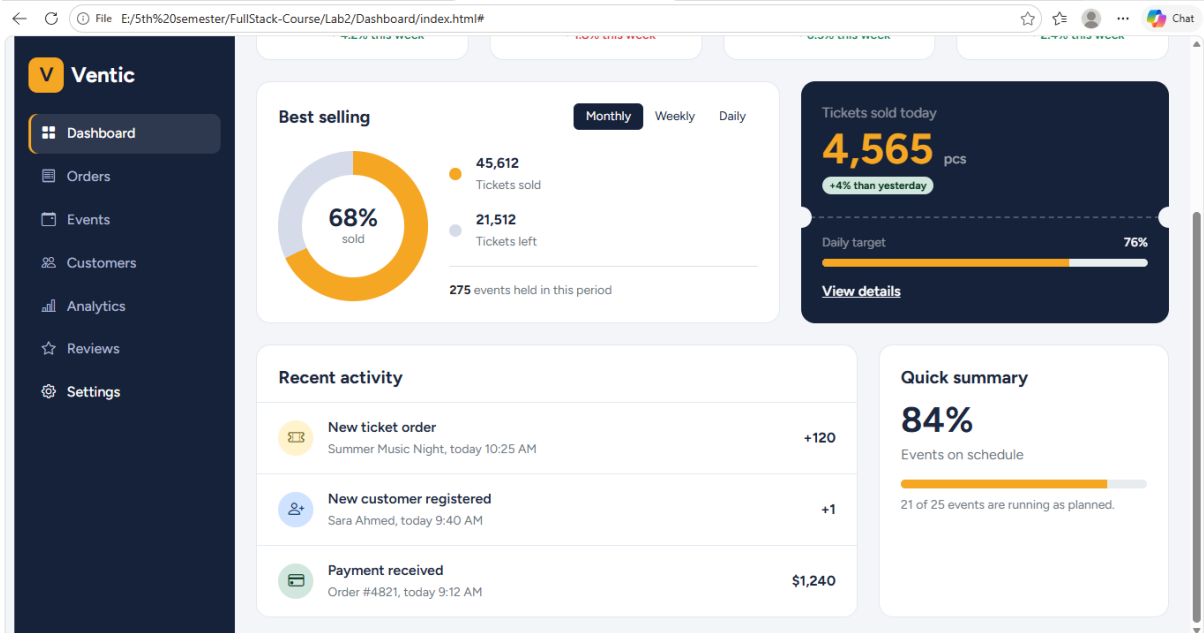

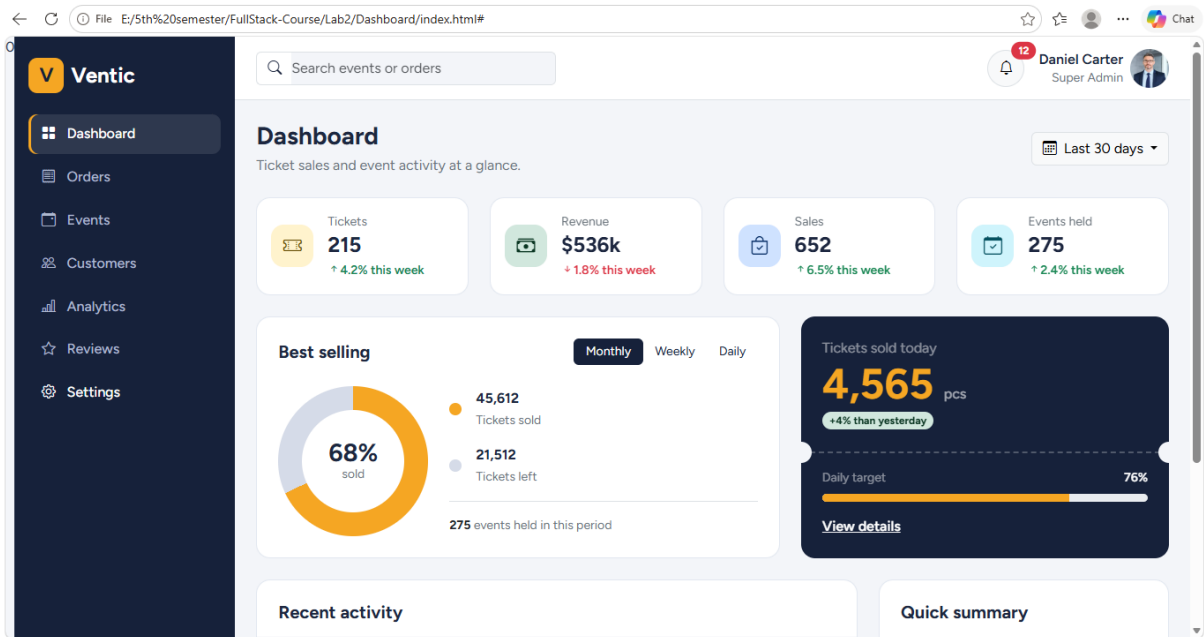

Team Page has three cards in a row, a Featured badge on the first card and three buttons below.

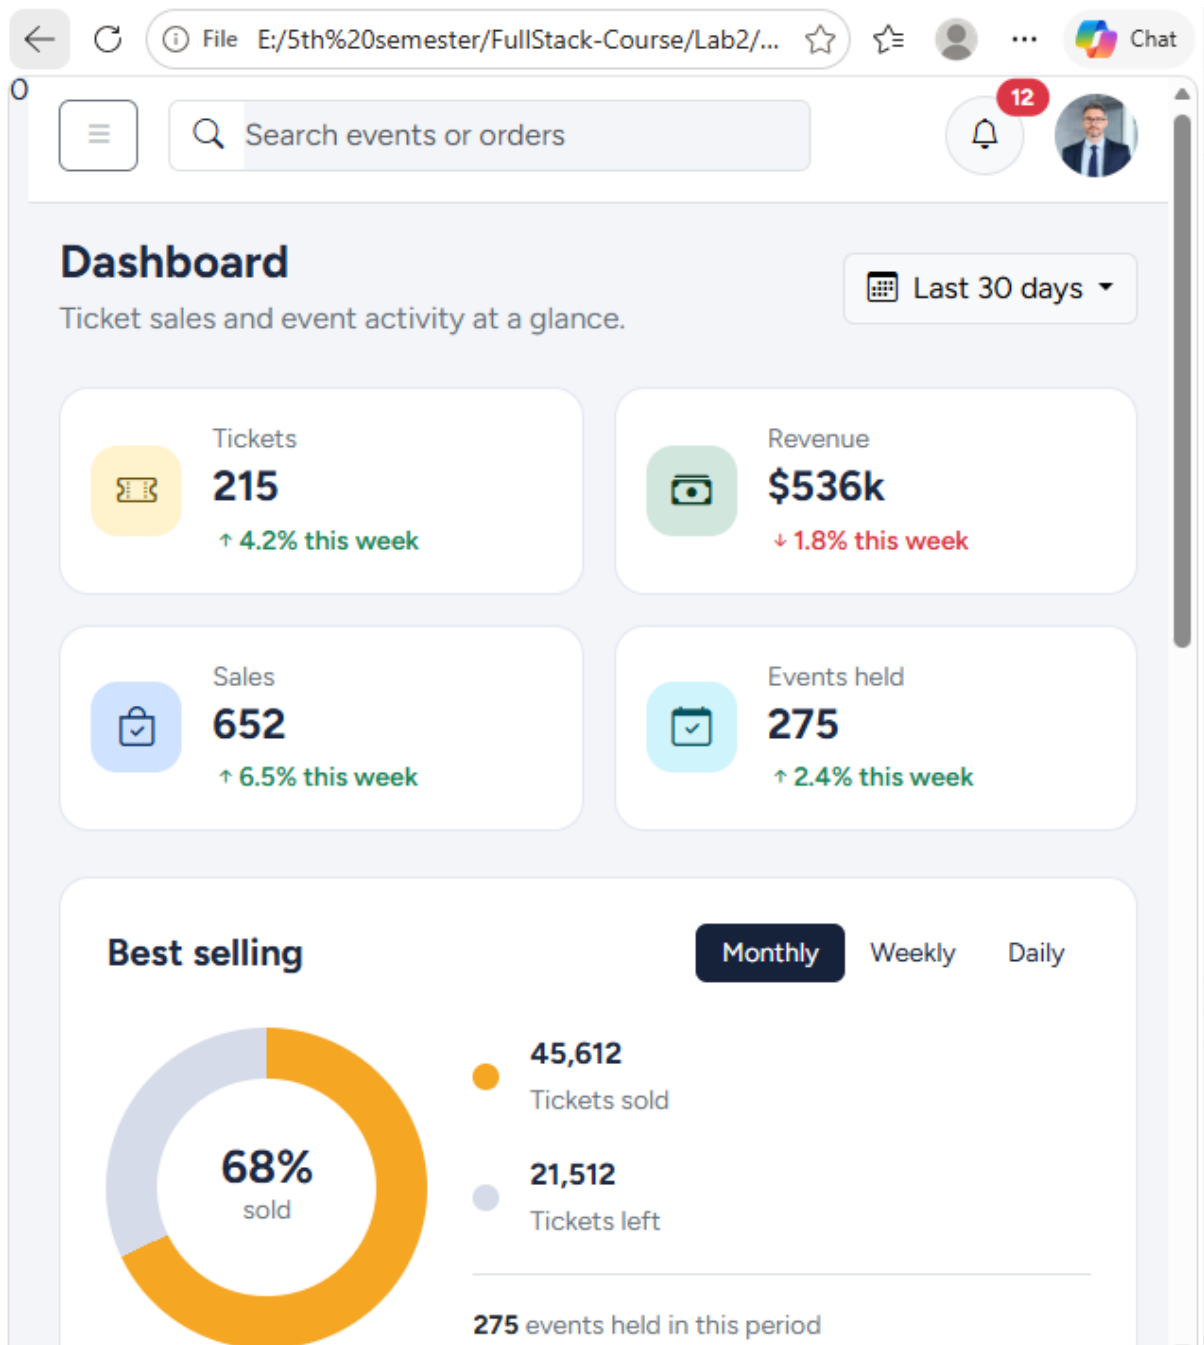

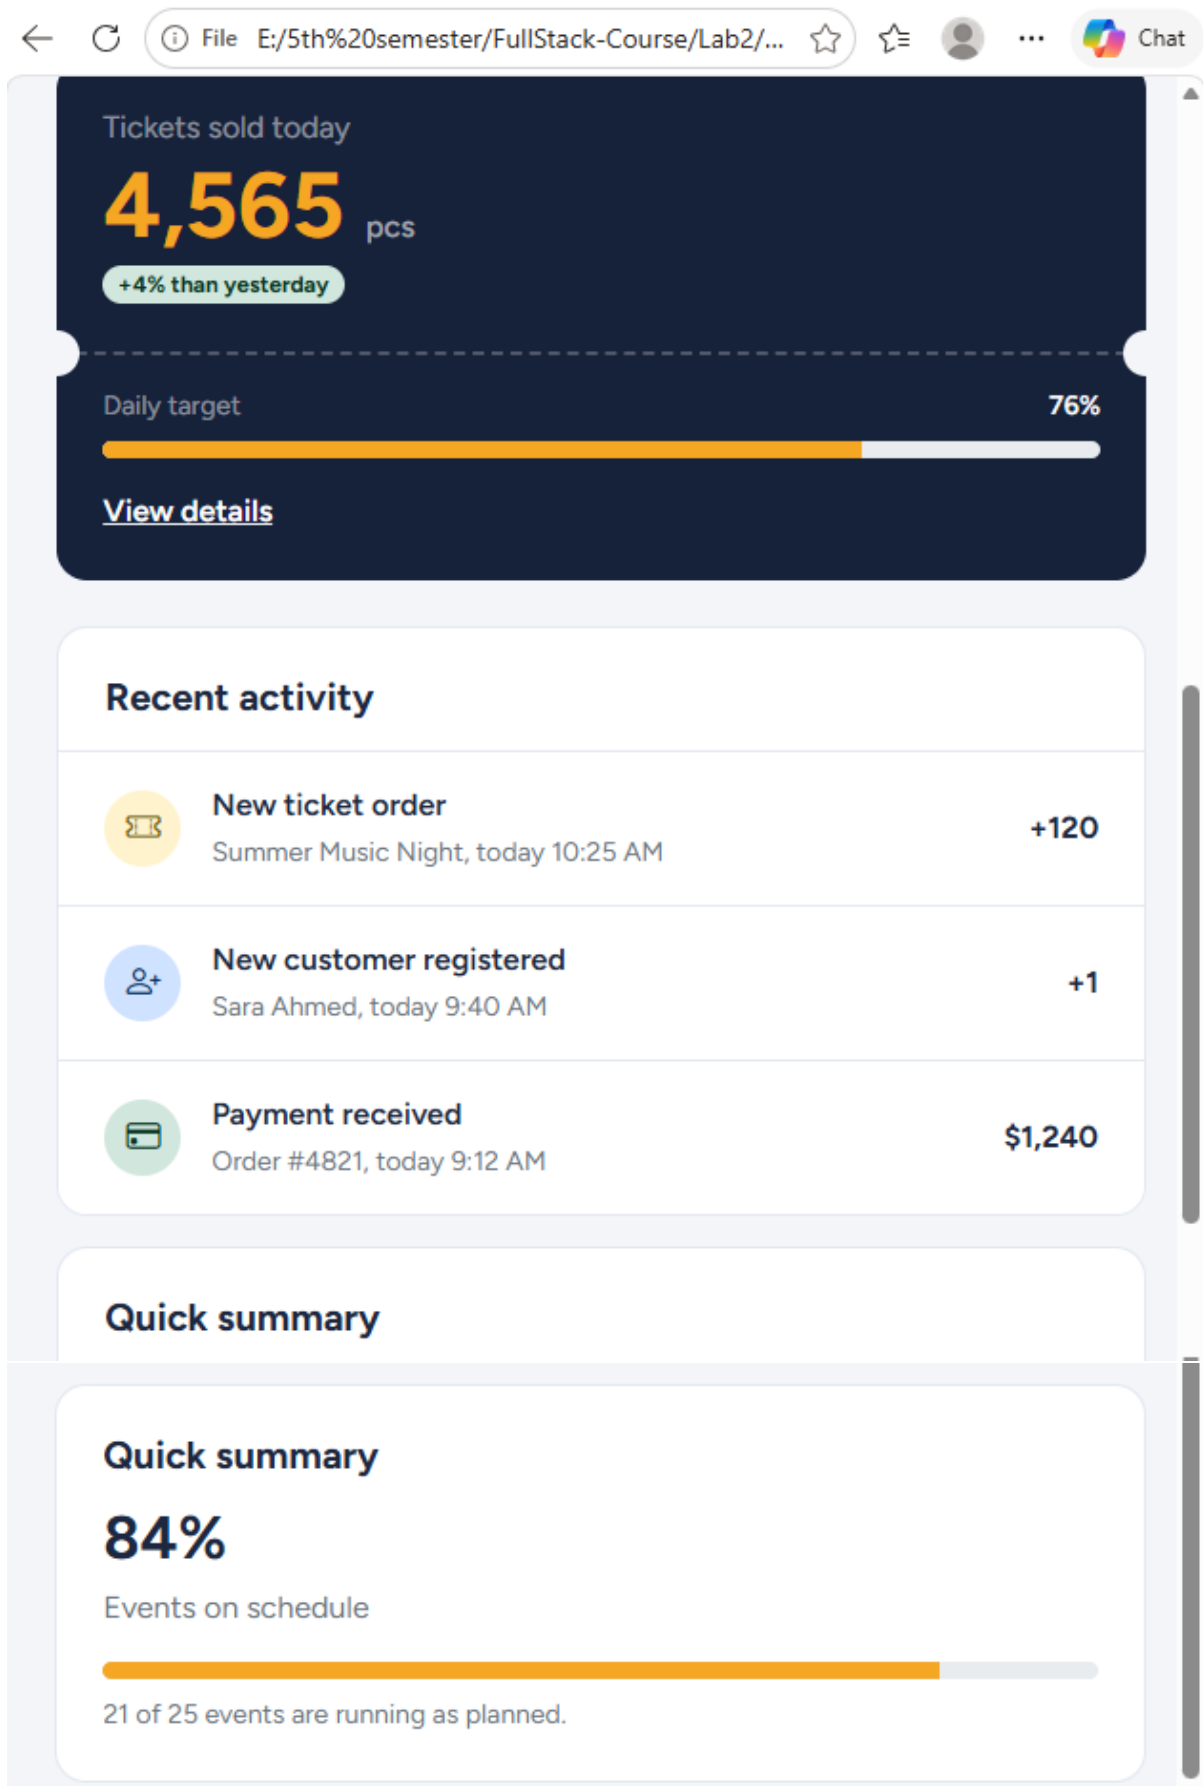

- Put the three cards in one div and made it a flex row with display: flex and gap.
- Gave the cards border-radius, box-shadow and padding.
- Made the card position: relative and the Featured badge position: absolute, so the badge stays in the corner.
- Put the buttons in another flex row. They still have the default browser style here.

Home Task Dashboard

Dashboard with a sidebar, a top bar, summary cards, a chart and a list.

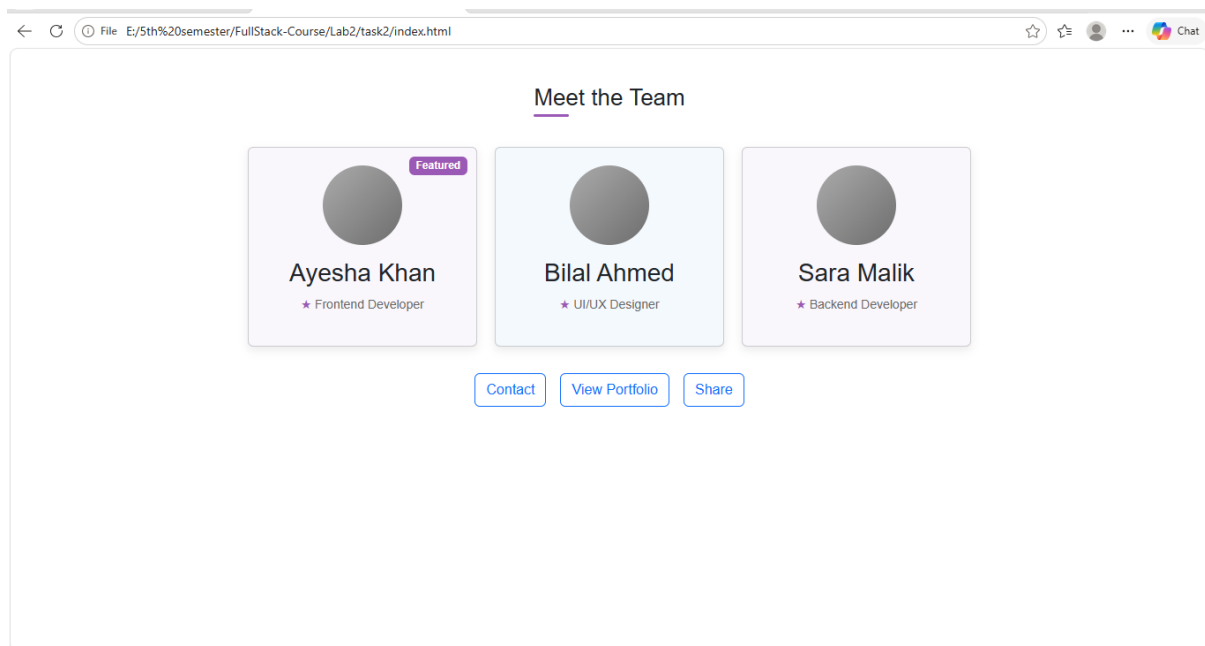

- It's responsive by using @media query

- d-flex to put the sidebar and the main content side by side. On a phone the sidebar becomes a slide-in menu (Bootstrap offcanvas).
- The top bar uses d-flex, an input-group for search and a rounded-circle admin photo. The red number on the bell uses position-absolute.
- The four summary cards use the Bootstrap grid (row, col) and the card class.
- The donut chart is made with only CSS, using conic-gradient.
- The Tickets sold today card has a dashed line with two small circles made with ::before and ::after.
- Recent activity uses list-group, and the bars use Bootstrap progress.

Task 2 for home

- **Task 1:** The three cards are inside a container with display: flex, flex-wrap: wrap and gap, so they wrap on small screens.
- **Task 2:** The Featured badge is position: absolute inside the card, which is position: relative.
- **Task 3:** The heading has an ::after purple underline, and the role text has a ::before star.
- **Task 4:** The cards have a drop-shadow filter. The avatars are grayscale and change to colour on hover with a transition.

- **Task 5:** The button row uses Bootstrap: d-flex justify-content-center gap-3, and each button is btn btn-outline-primary.
- **Task 6:** :nth-child(even) gives the middle card a light blue background.
